

MILIND

Greater Seattle Area, WA | (312)874-9671 | milind.fnu.791@gmail.com

PROFESSIONAL SUMMARY

Experienced Senior Software Engineer specializing in UI development, with a focus on crafting exceptional user experiences using ReactJs, TypeScript, AngularJS and Sitecore. Proficient in full-stack development, I've contributed to various projects using technologies like Angular, C#, and NodeJS. Skilled in optimizing performance and reducing deployment artifacts, I excel in leading teams and collaborating with stakeholders to achieve project objectives. Holder of a master's in computer science and certified Sitecore Experience Solution 10 Developer.

SKILLS

Technologies/Frameworks:

JavaScript, React, Typescript, HTML, C# (.NET), CSS/Less/Sass, Angular, NodeJS, Python, jQuery, JSON, Bootstrap, Express.js, SQL

Packages/Tools:

Sitecore CMS, Docker, Zeplin (for UX design), Git/Bitbucket, Webpack, NodeJS (for tooling and server-side rendering), GraphQL (API Query Language), Jest/Enzyme, Storybook, Postman, MySQL, Event Store, MongoDB, Gulp, Babel

CERTIFICATIONS

- **Sitecore Experience Solution 10 Developer** **July 2022**

EXPERIENCE

Senior Software Engineer (UI Lead), *Specialty Program Group*, Chicago, IL

March 2022 - Present

- Developed and maintained the company's top-of-funnel web sites using Sitecore, React, Redux, Typescript, HTML, CSS, SaaS and C#, focusing on cross browser compatibility and Responsive Web Design.
- Full ownership of UI products, including setting up and maintenance of the component library using NextJS, Webpack, Sitecore JSS, NPM, and Storybook.
- Worked on developing an in-house UI testing solution using Jest.
- Improved the core web vitals by 35-40% for the individual pages on the websites by focusing on resolving the *Least Contentful Paint (LCP)* and *Cumulative Layout Shift* statistics.
- Reduced the size of deployed artifacts by about 20% by improving the code reusability.
- Designed and developed Training and Development System for HR team using Core Java, JSP, Servlets, Tomcat and Oracle database.
- Created service health dashboards using Angular, ExpressJS, NodeJS and MongoDB, for monitoring the website health.
- Increased website search performance by 30% by writing custom modules using GraphQL and C# for navigating the content on our website.
- Design and development of Files Refresh and Card Product Utility applications using Struts Framework, Core Java, JSP and performed reverse engineering to develop flow charts.
- Implemented custom event and page traffic tracking on the website by adding a custom data layer for Google Tag Manager.
- Contributed to development and maintenance of a backend service architecture using C#, .NET, Kubernetes, Argo, and Docker.
- Well experienced in Core Java – asynchronous programming, multithreading, collections and a few design patterns.
- Contributed in the development of a custom CI/CD pipeline for building and deploying UI artifacts using BitBucket hooks, Jenkins and Docker.

Software Engineer, *Insureon*, Chicago, IL**Aug 2017 - March 2022**

- Worked as a full stack developer (AngularJS/Angular 2), C#, Event Store, Groovy) to develop/maintain the UI and multiple microservices for a legacy B2B Agency Management System in a CI/CD environment.
- Led a small team of developers to create a suite of SaaS products offered by the company using React and Redux.
- Increased code reusability and UX design standardization by developing and hosting a UI component library in React and Storybook, on a private npm registry.
- Developed the backend server with Spring Boot, involving different layers of the application including entity/model, DAO/repository, Controller, Service, Business, and Persistence.
- Developed the front-end using both Core Java (for non-UI and MDB poller specific tasks)
- Strong understanding of common API technologies, such as OAuth, SAML, Spring Boot and Micro services.
- Implemented a UI testing framework using Storybook for component testing, Selenium, and C# for workflow testing.
- Developed a module for lazy loading and performance optimization for the web application.
- Collaborated with product owners and architects for direction and critical decisions for the front-end.
- Contributed to development and maintenance of a backend service architecture supporting about 300 microservices, using C#, .NET, Event Store.
- Contribution to UX design following the mobile first paradigm, by interfacing with the client, and using tools like Zeplin and Confluence.
- Developed service health dashboards for monitoring the deployment details for individual microservices.
- Full ownership on development and maintenance of an admin dashboard for personnel permissions and leave management using Angular 8, SaaS, webpack, Babel and Gulp.

Software Engineer Intern, *Amadeus North America Inc.*, Waltham, MA**May 2016 - August 2016**

- Developed and maintained an automated data processing pipeline for QA in Java, using Java Mail, JAX-RS and Apache Common libraries and RESTful web services.
- Designed and developed the UI using HTML, JavaScript, CSS, SaaS, and jQuery.
- Reduced daily manual effort by approximately 4 hours.
- Integrated the application into the existing testing framework for local deployment.
- Set up the deployment and scheduling for the application by setting up a cron job on a Unix server.
- Setting up a rest API endpoint for the service to be used company wide.

Software Engineer, *Amadeus Software Labs*, Bangalore, India**June 2013 - June 2015**

- Worked on development and maintenance of an automation framework in Java and Selenium.
- Written UI workflow test scripts using Groovy, JavaScript, PowerShell Core Java Scripts, and Selenium.
- Created a single page application for employee time tracking and goal management, following Mobile first design, using HTML, CSS media queries, JavaScript, and jQuery.
- Reduced the daily manual effort by 2 hours by creating an automated reporting workflow for our test suites using HTML and JavaScript.
- Created a custom application to automatically generate and run test suites by integrating HP ALM APIs, into a UI written using HTML, CSS, JavaScript and jQuery, using Jenkins to run scheduled jobs.
- Designed and developed a social platform for office employees, to increase group bookings and save costs for corporate travel using Python and PHP.
- Developed and maintained RESTful APIs, integrating front-end with back-end services.

EDUCATION**University of Illinois at Chicago****August 2015 - May 2017***Master of Science, Computer Science***Guru Gobind Singh Indraprastha University, India****September 2009 - June 2013***Bachelor of Technology, Information Technology*
